

Transaction Processing Services

A Cloud-based Payment Processing Platform

Transaction Processing Services (TPS) is a highly customizable suite of services for payment processing, document processing and workflow management. Implemented as a cloud service, the TPS Platform provides the underlying infrastructure for RP Solutions' payment acceptance solutions including TPS Remittance, TPS Cashier, TPS Mobile and TPS ATM.

Benefits

- Pay-as-you-go model eliminates large upfront capital investments, reduces IT resource requirements and lowers ongoing TCO
- Fully distributed system allows easy access from any location
- Cloud computing provides automated backups, full data redundancy, free upgrades and maximum uptime
- TPS Platform allows you to quickly deploy additional payment options, increasing customer satisfaction and giving you a competitive edge

Transaction Processing Services

The TPS Platform has the right features, flexibility and tools to meet your business requirements.

Workflow Monitoring

Monitor workflow from all payment channels using a comprehensive dashboard

Business Rules

Define custom business rules for processing, exception handling, risk assessment and workflow

Administrative Portal

Track system performance, set up new users, assign role-based privileges, configure alerts and review audit logs

System Integration

Integrate with back end systems for real-time validation and posting. Use web services or file extracts to update internal systems.

Reporting

Generate daily production, productivity and performance reports

Distributed Capture

Capture payments and remittance data from anywhere using scanners, mail extraction equipment, POS devices or smartphones

Client Applications

Perform operations such as data completion, balancing and exception review using web-based apps

Payment Processing

Payments can be cleared or deposit files can be created and delivered to you or to the proper clearing end point

Consolidate Receivables

Manage payments from multiple sources with a consolidated view

Archive

Perform research using an archive of images and transaction data. Sensitive customer information can be redacted.

Powered by Amazon Web Services

- Leading data security protection
- Robust, scalable and high performance computing
- Disaster recovery with “hot standby” environment that enables rapid failover
