

TPS RapidRDC

Remote Check Capture Made Easy

With TPS RapidRDC, from RP Solutions, your merchants, employees, and field agents can accept payments anywhere, anytime. This mobile app is an ideal solution for insurance agents, merchants, brokers, field technicians, service contractors, charitable organizations and more. TPS RapidRDC provides rapid remote image capture and consolidated deposit of check payments, giving you and your clients instant processing through an easy to use app. It's as simple as snapping a picture on your mobile device.

In just a few simple clicks you can capture and deposit checks to your central bank account without involving multiple steps, multiple banks, or making clients come to an office or retail location.

Benefits

TPS RapidRDC:

- Reduces delays in posting payments to customer accounts
- Accelerates cash flow - allows funds to be accessible sooner
- Securely accepts check payments anywhere/anytime
- Transmits customer checks instantly and eliminates mail delays
- Provides peace of mind with quick, safe, and secure transactions
- Consolidates deposits!

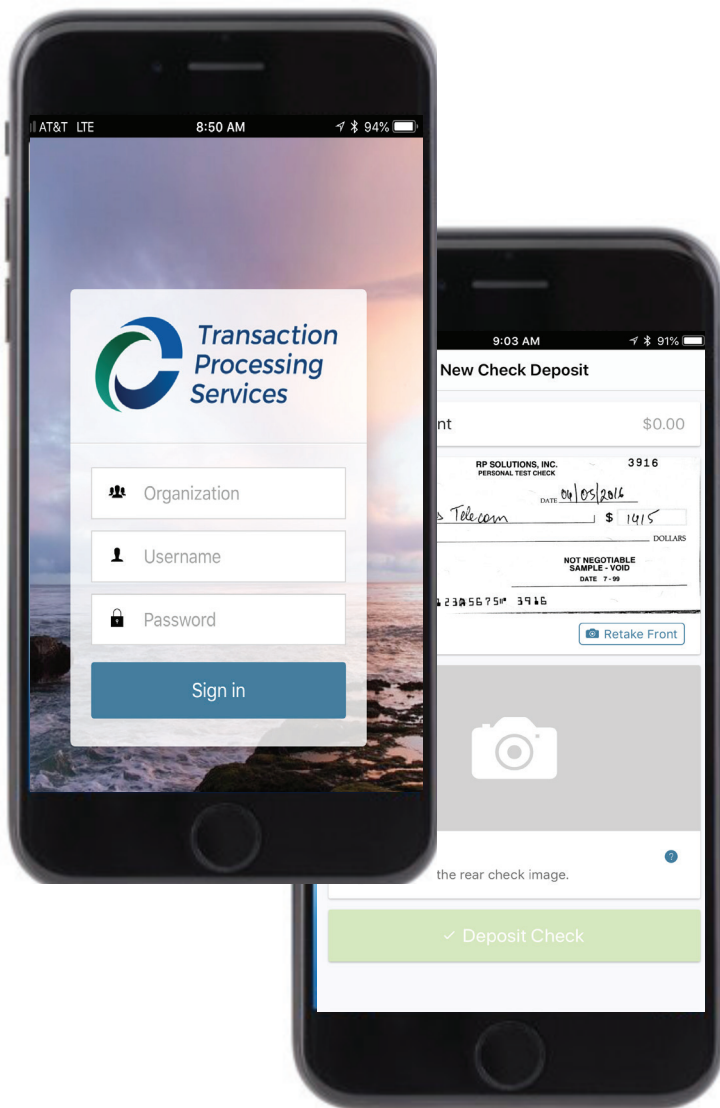

TPS RapidRDC

Remote Check Capture Made Easy

The TPS RapidRDC mobile application is used to capture and process remote deposit checks to approved business accounts securely and efficiently! The capture is managed with the application while the deposits are processed through ICL files directly sent to the processing bank(s). No personal data is collected or kept by RP Solutions or within the application itself.

Login credentials are granted only to authorized users. Only employees/field agents associated with your account will have access or login capability.

About the TPS Platform

TPS RapidRDC is a Mobile App backed by our Transaction Processing Services (TPS) **Platform**.

TPS RapidRDC can be used as a stand-alone product **or** you can rollout the full TPS Platform to manage your entire Payment Processing Operation. The TPS Platform is cloud based, which provides many benefits, including:

- **Enhanced Security.** TPS is hosted on Amazon AWS. Amazon invests millions of dollars annually on risk mitigation to ensure the highest security standards. Amazon AWS is used by clients such as Netflix for all streaming and even the critical data of the CIA.
- **Risk Reduction.** Images are automatically replicated across multiple data centers, maximizing business continuity and disaster recovery efforts.
- **Reduced Cost.** Cloud based TPS has minimal start-up fees and eliminates the need for in-house server hardware/software and annual maintenance fees.
- **Quick, Simple Remote Implementation.** Once implemented, the TPS Platform works with any browser, simply enter your credentials and get started.
